**Indications**

- Patient with reported or continuing seizure activity

**SPECIAL CONSIDERATIONS**

- Consider treatable etiologies: hypoglycemia, hypoxia, narcotic overdose, unusual odor of alcohol, signs of trauma, medic alert tag
- Be attentive to excessive oral secretions, vomiting, and ineffective breathing
- Treatment should be based on the severity and length of the seizure activity

**Active**

- Protect patient from injury (move furniture, etc)
- Consider possible treatment of diabetic patient (see ALOC)

**Post-Seizure (post-ictal)**

- Protect patient from injury (move furniture, etc)
- Consider possible treatment of diabetic patient (see ALOC)
- Frequently evaluate patient’s level of consciousness and anticipate recurring seizures
- Suction as needed

**If febrile seizure**

- Initiate cooling measures

Transfer care to ALS personnel as soon as possible
